

ABOUT ROSALES +

Rosales + specializes in the design, engineering and architecture of landmark bridges, highway corridors, streetscape elements, and other transportation facilities. From pedestrian bridges to twelve-lane landmark river crossings, their work encompasses projects small and large in the U.S. and abroad.

Since its inception, Rosales + has been an unsurpassed resource for high quality transportation architecture, bridge design, and effective community participation. Their professional staff is skilled at working with stakeholders and community groups to incorporate their input and resolve controversies that often accompany major bridge projects. They also have a proven record of creative collaboration with engineering and design firms in large-scale bridge projects and intricate pedestrian bridges.

Rosales + possesses a unique combination of architectural ingenuity, engineering knowledge, and communication skills that allows it to create elegant and cost-effective bridges with strong community support. They aim to solve complex transportation problems while creating dramatic aesthetic statements in cities and communities around the world. The company was founded by Miguel Rosales, AIA in 1997 and has a technical staff that includes architects, bridge engineers, landscape architects, lighting designers, and urban designers.
